

# Analytical Report — Last Quarter Performance

## 1. Executive Summary

This report summarizes the organization's performance for the last quarter, covering sales, profitability, customer behavior, product performance, and regional trends. The analysis is based on the Sales, Customers, Products, Stores, and Exchange Rates datasets and visualized in Power BI. Key findings, trends, and data-driven recommendations are provided to support strategic decisions.

### 1.1 Key Metrics Comparison

| Metric             | Current Quarter (Qn) | Previous Quarter (Qn-1) | Same Quarter Last Year (Qn LY) |
|--------------------|----------------------|-------------------------|--------------------------------|
| Total Sales (USD)  | 1M                   | 1M                      | 5M                             |
| Total Profit (USD) | 608K                 | 675K                    | 3M                             |
| Profit Margin %    | 58.5%                | 58.5%                   | 58.7%                          |
| Total Orders       | 498                  | 626                     | 2K                             |

### 1.2 Major Trends & Patterns

- During the current quarter, the data reveals a noticeable decline in overall business performance compared to both the previous quarter and the same quarter of the previous year. Total Sales decreased from 5M to 1M USD, and Total Orders dropped from 2K to 498, reflecting a significant reduction in sales volume and customer transactions. Similarly, Total

Profit fell from 3M to 608K USD, following the downward trend in sales performance. Despite these declines, the Profit Margin remained stable at approximately 58.5%, consistent with both comparative periods. This indicates that while the business experienced a slowdown in activity, its operational efficiency and cost structure remained strong. The stable margin suggests that pricing strategies and production costs were effectively managed, and the decrease in revenue is primarily due to lower sales volume rather than reduced profitability per transaction. This pattern may point to seasonal factors or temporary market conditions affecting demand, rather than structural inefficiencies. The organization should therefore focus on stimulating demand through targeted marketing initiatives, promotions, or customer engagement strategies to recover sales momentum in upcoming quarters.

- Category Performance: Computers and Home Appliances drove most of the growth, while Cell Phones slowed.
- Regional Patterns: The United States and Online channel account for the largest share of sales.

### 1.3 Top Performers

- Top Categories: Computers, Computers, Cameras and camcorders

- Top Products:

| Product Name                                | Category     | Brand                | Profit     | Total Sales (USD) |
|---------------------------------------------|--------------|----------------------|------------|-------------------|
| Adventure Works 52" LCD HDTV X590 Black     | TV and Video | Adventure Works      | 250,152.93 | 374,098.71        |
| Adventure Works 52" LCD HDTV X590 White     | TV and Video | Adventure Works      | 263,727.12 | 394,398.64        |
| Adventure Works Desktop PC2.33 XD233 Black  | Computers    | Adventure Works      | 299,352.90 | 447,678.00        |
| Adventure Works Desktop PC2.33 XD233 Brown  | Computers    | Adventure Works      | 310,368.05 | 464,151.00        |
| Adventure Works Desktop PC2.33 XD233 Silver | Computers    | Adventure Works      | 311,663.95 | 466,089.00        |
| Adventure Works Desktop PC2.33 XD233 White  | Computers    | Adventure Works      | 292,225.45 | 437,019.00        |
| WWI Desktop PC2.33 X2330 Black              | Computers    | Wide World Importers | 337,986.00 | 505,450.00        |
| WWI Desktop PC2.33 X2330 Brown              | Computers    | Wide World Importers | 282,679.20 | 422,740.00        |
| WWI Desktop PC2.33 X2330 Silver             | Computers    | Wide World Importers | 240,891.84 | 360,248.00        |
| WWI Desktop PC2.33 X2330 White              | Computers    | Wide World Importers | 283,908.24 | 424,578.00        |

- Top Regions: United States, United Kingdom, Canada

## 2. Strategic Insights & Recommendations

### 2.1 Underperforming Areas

The analysis shows that the Games and Toys category was among the weakest performers this quarter, contributing minimally to total revenue compared to high-performing segments such as Electronics and Home Appliances.

This decline appears to be driven by low product visibility, limited promotional activity, and seasonal fluctuations in demand. Additionally, the category suffered from lower repeat customer engagement, indicating the need for stronger loyalty initiatives and customer retention programs.

At the country level, France showed a noticeable drop in both sales and order volume compared to other regions. The results suggest that limited regional promotions and reduced product availability may have impacted performance.

At the store level, several outlets — specifically Stores 2, 13, 14, and 17 — underperformed compared to their counterparts. These locations recorded lower traffic and smaller transaction volumes, likely due to limited stock variety, weak local marketing, and lower customer engagement.

Recommendations:

Increase marketing investment and targeted advertising for the Games and Toys category to improve visibility and awareness.

Launch seasonal promotions, bundle offers, and special events (e.g., holidays or school vacations) to stimulate demand.

Enhance store-level operations for underperforming branches (2, 13, 14, and 17) through better inventory allocation and staff training.

Review regional marketing strategies in France to boost brand visibility and customer engagement.

Conduct customer segmentation analysis to identify target audiences — particularly families and young consumers — and design tailored marketing content for these groups.

## 2.2 Seasonal Factors

A review of quarterly performance reveals clear seasonal trends influencing sales and profitability.

The Electronics and Home Appliances categories typically see strong performance during holiday periods and promotional campaigns (such as end-of-year and summer sales). However, this quarter coincides with a post-holiday off-peak period, leading to a moderate decline in sales volume despite maintaining stable profit margins.

Similarly, Games and Toys exhibit a highly seasonal sales pattern, with demand peaking during holiday seasons and school breaks but dropping sharply in regular months. This pattern largely explains the weak performance of the category in the current quarter.

In contrast, non-seasonal products, such as small appliances and essential electronics, maintained steady sales throughout the year, partially offsetting the declines in other categories.

Recommendations:

Align marketing and promotional activities with peak demand periods such as holidays, school vacations, and back-to-school campaigns.

Use historical sales data to forecast seasonal fluctuations and plan inventory and staffing more effectively.

Introduce off-season discounts and limited-time bundles to maintain engagement during low-demand periods.

Develop a predictive Power BI model to anticipate category-level sales changes and support proactive business planning.

### 2.3 Data-Driven Recommendations

To improve performance and sustain growth, the following actions are recommended based on data insights:

Implement targeted promotions for mid-performing categories to accelerate turnover.

Optimize pricing strategies for low-margin products through supplier negotiations and cost reviews.

Increase digital marketing investment in high-potential regions to enhance visibility and customer reach.

Introduce monthly exchange rate monitoring to minimize currency fluctuation risks.

Strengthen data collection at the POS (Point of Sale) to better track in-store versus online sales performance.

### 2.4 Risk Factors and Opportunities

#### Potential Risks:

**Exchange Rate Volatility:** Fluctuations in foreign currencies may affect profit margins when converting to USD.

**Supply Chain Delays:** Logistics issues could impact timely product availability, particularly for imported goods.

**Concentration Risk:** Over-reliance on top-performing categories like Electronics could expose the business to demand shifts.

#### Opportunities:

**High-Growth Regions:** Expand further into markets showing rising potential, such as the Middle East and Asia.

Cross-Selling and Bundling: Combine high-demand and slow-moving products to increase average order value.

Pricing Optimization: Use Power BI insights to evaluate dynamic pricing opportunities.

Digital Expansion: Enhance online and mobile channels to reach younger, tech-savvy customers.
